

QUANTUM FIELD THEORY IN DE SITTER SPACETIME

by

Stefan Hollands

Lecture 1

DeSitter basics : different coordinate patches, horizons, ... ; propagators for free scalar field in deSitter spacetime.

Lecture 2

Wick rotation ; cosmic no hair theorem for propagators ; Unruh effect ; Feynman rules for interacting quantum field theories in deSitter spacetime, loop integrals (time permitting).

Lecture 3

Basics of entanglement ; entanglement across deSitter horizons ; speculative ideas.
